

Milesight-Troubleshooting

DDNS

| | | | |
|-------------|----------|--------|-----------|
| NVR Version | XX.9.0.4 | Update | 2019.5.20 |
|-------------|----------|--------|-----------|

1. What is DDNS

DNS: Domain Name System

To translate the numerical IP addresses like 208.80.152.201 into domain names, which can be easily memorized by humans like “milesight.org”.

DDNS: Dynamic DNS or DynDNS

To translate changing IP addresses into a constant domain name. This is used to provide a persistent domain name for a resource that may change address on the network.

DDNS provider: ddns.milesight.com, dyndns.org, freedns.afraid.org, www.no-ip.com, www.zoneedit.com

2. How to Set DDNS

So far, Milesight NVR can support 5 DDNS servers, as shown in Figure 1:

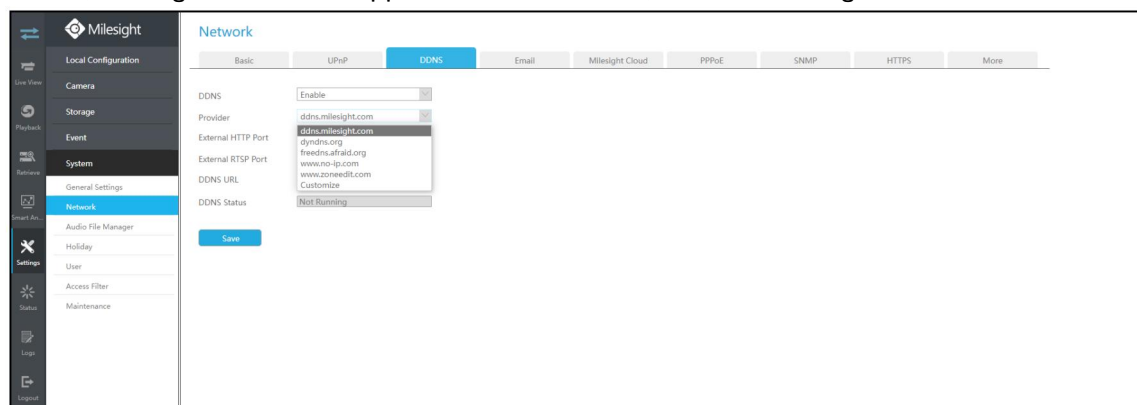

Figure 1 DDNS Server

1) You can choose “ddns.milesight.com” as provider for DDNS

Step1: Recommend to enable and configure UPnP ports which can be used directly in DDNS, click “Save” to save your setting.

Note: Make sure the “Status” is “Valid”

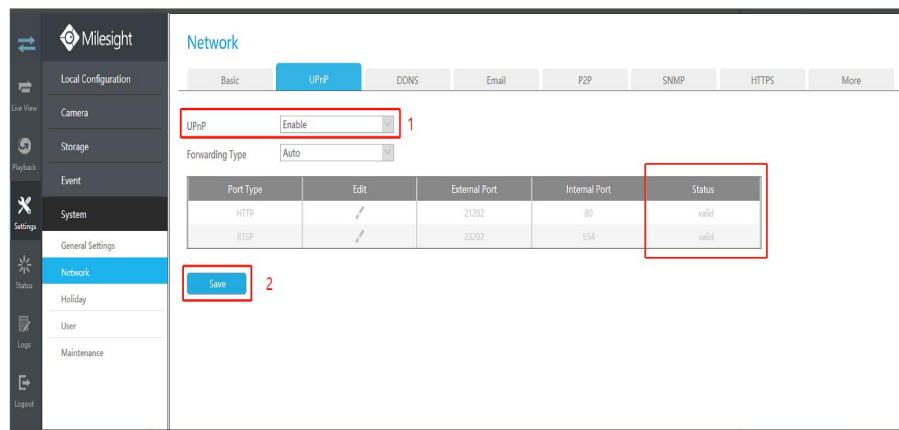

Figure 2 UPnP

Step2: Enable DDNS and then click“Save”, it will take effect when the DDNS Status changes to “Running”.

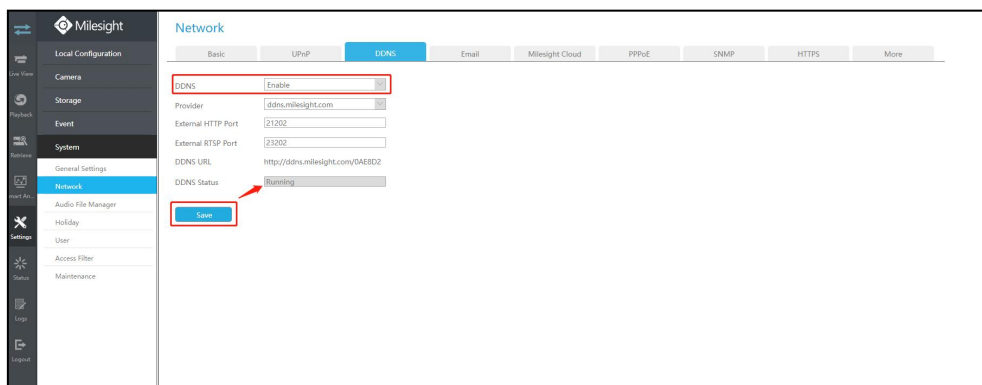

Figure 3 Milesight DDNS

Step3: After enabling DDNS function, you can access this NVR by DDNS URL:

Note: You can find the DDNS URL in the DDNS setting interface.

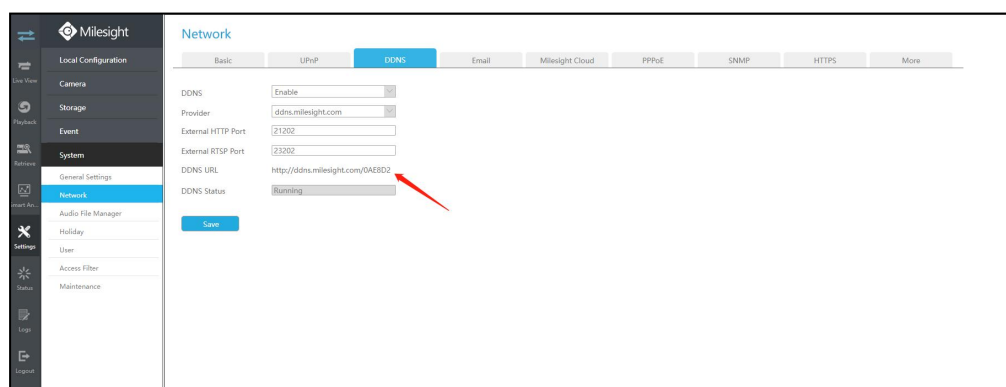

Figure 4 DDNS URL

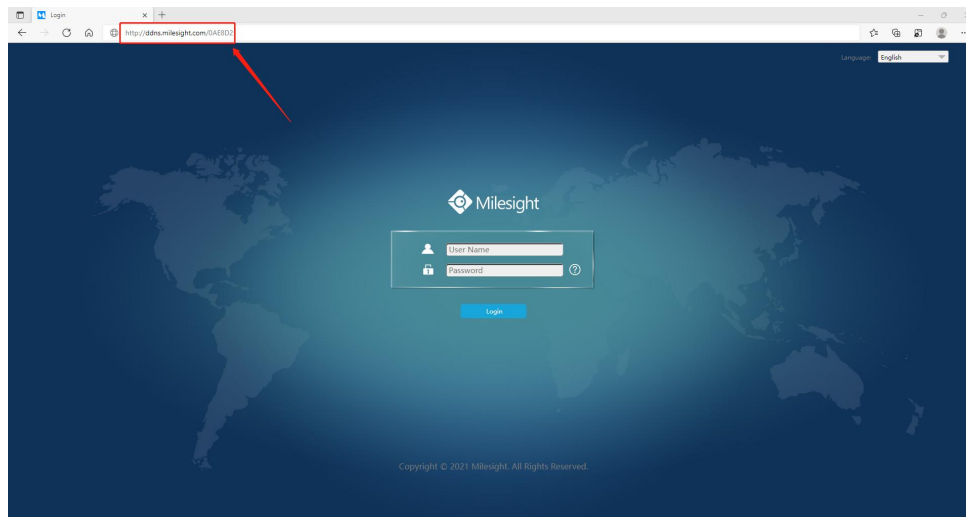

Figure 5 Login Interface

2) You also can choose the third party as provider for DDNS

Take **freedns.afraid.org** as an example:

Step1: Log in <http://freedns.afraid.org> .

Step2: Click on the “Sign Up!”.

- **Free DNS, Dynamic DNS, Static DNS** services
- Free subdomain hosting, free domain hosting, free backup dns, reverse IPv6 DNS hosting (forward/reverse)
- Free URL redirection [web forwarding]
- Paid services available for increased account capacity
- Unlimited number of domains per account (yes really)
- 5 free shared hostnames, use anywhere
- 20 free subdomains per domain, use on your own domains only
- **INSTANTLY** point yourname.afraid.org or yourname.com to any IP or URL
- Supports every TLD on the Internet
- Currently **84,583 other domains besides afraid.org** in our shared domain pool
- Funding is supplied by the members who go premium. Funding goes directly to servers and high bandwidth connections they reside on
- Robust support for **CNAME, A, AAAA, MX, NS, TXT, LOC, RP, HINFO, SRV** records
- Are you a web developer? You can use [nameserver branding](#) to name our nameservers as your own! Let us worry about the maintenance/redundancy
- Round robin DNS supported (Multiple IP addresses for 1 hostname)
- IPv6 forward **AND** reverse (both .int and .arpa) supported
- **Dynamic DNS** supported, several [clients for Win32 and UNIX available](#)
- Forward your hosts to any existing URL on the internet (even to a different port if your ISP blocks 80) with the Web Forward system
- URL cloaking redirection supported, optionally hide real URL of your site in the address bar
- Allows you to change web hosting providers without messy DNS propagation delays
- Simple, fast, flexible and reliable interface, feedback is welcome
- Works with any existing web host you may already be using for both DNS and hosting
- If your web host goes down, visitors will see a "timeout" error instead of a "site does not exist" error, e-mail will also remain queued for 5 days
- If you put a domain in afraid.org, you can edit TTL, Minimum, Allow/Deny AXFR's, and approve/disapprove others from using hosts on your domain.
- You can also share your domain with the users of afraid.org, or your own web site visitors using our 'webclude' feature
- Support for vanity dns hosts (example: i.knew.you.were.afraid.org) currently **84,583** domains in the shared pool
- Fast and easy [setup process](#). Setup an account in less than 5 minutes
- Extremely reliable, fast, and redundant hosting, and interface
- **All updates go live instantaneously.**

[More Info, Q&A](#)

[Sign Up!](#)

Figure 6 Sign Up

Step3: Create a new account under server.

Figure 7 Add a new account

Step4: After registering successfully, please activate the Email and then choose to add a new subdomain.

Figure 8 Add a new subdomain

Step5: After adding a subdomain, please check the HASH for this account. Click on "Dynamic DNS" option, window will pop up as below:

Figure 9 Direct URL

Step6: Click on the “Directly URL”.

You can check HASH from the following address:

“https://freedns.afraid.org/dynamic/update.php?azNhZWdraHVGWjhIWTJCYndCUWk6MTc2NTEwNDg=”

Figure 10 HASH

Step7: Enter the information on the DDNS setting interface and save the setting, it will take effect when the DDNS Status changes to “Running”.
